Preface

Thank you for choosing a Canon product. Before using the machine, please read the following instructions for your safety.

Important Safety Instructions

WARNING

Except as specifically described in this guide, do not attempt to service the machine yourself. Never attempt to disassemble the machine: opening and removing its interior covers will expose you to dangerous voltages and other risks. For all service, contact your local authorized Canon dealer.

Handling and Maintenance

- Follow all warnings and instructions marked on the machine.
- Do not subject the machine to strong physical shocks or vibrations.
- Always unplug the machine before moving or cleaning it.
- To avoid paper jams, never unplug the power cord, open the left cover, or add or remove paper in the machine while printing.
- Always grip the handle on the sides of the machine when you lift the machine. Never lift the machine by any of its trays or attachments.
- Do not insert any objects into the slots or openings on the machine since they may touch dangerous voltage points or short out parts. This could result in fire or electric shock.
- Do not allow small objects (such as pins, paper clips, or staples) to fall into the machine.
- To avoid spillage in or around the machine, do not eat or drink near it.
- Keep the machine clean. Dust accumulation can prevent the machine from operating properly.

- Unplug the machine from the wall outlet and contact your local authorized Canon dealer in any of the following cases:
 - When the power cord or plug is damaged or frayed.
 - If liquid or small object has fallen into the machine.
 - If the machine has been exposed to rain or water.
 - If the machine does not operate normally when you have followed the instructions in this guide. Adjust only those controls that are covered by the instructions in this guide. Improper adjustment of other controls may result in damage and may require extensive work by a qualified technician to restore the product to normal operation.
 - If the machine has been dropped.
 - If the machine exhibits a distinct change in performance, indicating a need for servicing.

Location

- Place the machine on a flat, stable, vibration-free surface that is strong enough to support its weight.
- Place the machine in a cool, dry, clean, well ventilated place.
- Make sure the area is free from dust.
- Make sure the location is not exposed to high temperature or humidity.
- Keep the machine away from direct sunlight as this can damage it. If you have to place the machine near a window, install heavy curtains or blinds.
- Do not use the machine near water. Make sure that no wet or humid objects come into contact with the machine.
- Do not use or store the machine outdoors.
- Do not place the machine near devices that contain magnets or generate magnetic fields, such as speakers.
- If possible, place the machine near an existing telephone line outlet for easy connection of the telephone line cord, and to avoid the expense of installing a new outlet.
- Place the machine near a standard 120 V AC (60 Hz) power outlet.

- To ensure reliable operation of the machine and to protect it from overheating (which can cause it to operate abnormally and create a fire risk), do not block the exhaust vent. Never block or cover any openings on the machine by placing it on a bed, sofa, rug, or other similar surface. Do not place the machine in a cupboard or built-in installation, or near a radiator or other heat source unless proper ventilation is provided. Leave enough space around all sides of the machine, and make sure that the clearance between the machine's ventilation slot and wall or other equipment is more than 1/4" (5 cm).
- Do not stack boxes or furniture around the power outlet. Keep the area free so you can reach the outlet quickly. If you notice anything unusual (smoke, strange odors, noises) around the machine, unplug the power cord immediately. Contact your local authorized Canon dealer.
- Do not allow anything to rest on the power cord, and do not place the machine where the cord will be walked on. Make sure the cord is not knotted or kinked.

Power Supply

- During electrical storms, unplug the power cord from the power outlet.
(Please note that any documents stored in the machine's memory will be deleted when you unplug the power cord.)
- Whenever you unplug the power cord, wait at least five seconds before you plug it in again.
- Do not plug the power cord into an uninterruptible power supply (UPS).

WARNING

This product emits low level magnetic flux. If you use a cardiac pacemaker and feel abnormalities, please move away from this product and consult your doctor.

How to Use This Guide

Symbols Used in This Manual

The following symbols are used throughout the manuals for the machine and indicate the warnings, cautions and notes you should keep in mind when using the machine.

WARNING

Indicates a warning that may lead to death or serious injury if not observed.

CAUTION

Explains how to avoid actions that could injure you or damage your machine.

NOTE

Explains operating restrictions and how to avoid minor difficulties.

In addition, this guide uses distinctive notations to identify keys and information in the LCD:

imageRUNNER 1023/1023N: Model F189200
imageRUNNER 1023iF: Model F189202

This device complies with Part 15 of the FCC Rules.
Operation is subject to the following two conditions:

(1) This device may not cause harmful interference,

and

(2) This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Use of shielded cables is required to comply with Class B limits in Subpart B of Part 15 of the FCC Rules.

Do not make any changes or modifications to the equipment unless otherwise specified in this manual. If you make such changes or modifications, you could be required to stop operation of the equipment.

If your equipment malfunctions, please contact your local authorized Canon dealer from whom you purchased the equipment (if under warranty), or with whom you have a servicing contact. If you are not sure who to contact, and have both purchased and are using the equipment in the U.S.A., please refer to the “SUPPORT” page on Canon USA’s Web site (<http://www.usa.canon.com>).

Preinstallation Requirements for Canon Facsimile Equipment

A. Location

Supply a suitable table, cabinet, or desk for the machine. See Chapter 14, “Appendix,” for specific dimensions and weight.

B. Order Information

1. A single telephone line (touch-tone or rotary) should be used.
2. Order an RJ11-C telephone wall jack (USOC), which should be installed by the telephone company. If the RJ11-C wall jack is not present, telephone/facsimile operation is not possible.
3. Order a normal business line from your telephone company's business representative. The line should be a regular voice grade line or an equivalent one. Use one line per unit.

DDD (Direct Distance Dial) line

-or-

IDDD (International Direct Distance Dial) line if you communicate overseas

NOTE

Canon recommends an individual line following industry standards, i.e., 2,500 (touch-tone) or 500 (rotary/pulse dial) telephones. A dedicated extension off a PBX (Private Branch eXchange) unit without “Call Waiting” can be used with your facsimile unit. Key telephone systems are not recommended because they send nonstandard signals to individual telephones for ringing and special codes, which may cause a facsimile error.

C. Power Requirements

The machine should be connected to a standard 120 volt AC, three-wire grounded outlet only.

Do not connect this machine to an outlet or power line shared with other appliances that cause “electrical noise.” Air conditioners, electric typewriters, copiers, and machines of this sort generate electrical noise that often interferes with communications equipment and the sending and receiving of documents.

Connection of the Equipment

This equipment complies with Part 68 of the FCC rules and the requirements adopted by the ACTA. On the rear panel of this equipment is a label that contains, among other information, a product identifier in the format of US:AAAEQ##TXXXX. If requested, this number must be provided to the telephone company.

The REN (Ringer Equivalence Number) is used to determine the number of devices that may be connected to a telephone line. Excessive RENs on a telephone line may result in the devices not ringing in response to an incoming call. In most, but not all areas, the sum of the RENs should not exceed five (5.0). To be certain of the number of devices that may be connected to a line, as determined by the total RENs, contact the local telephone company. The REN for this product is part of the product identifier that has the format US:AAAEQ##TXXXX. The digits represented by ## are the REN without a decimal point (e.g., 10 is a REN of 1.0).

An FCC compliant telephone line cable and modular plug is provided with this equipment. This equipment is designed to be connected to the telephone network or premise wiring using a compatible modular jack that is Part 68 compliant.

This equipment may not be used on coin service provided by the telephone company. Connection to party lines is subjected to state tariffs.

In Case of Equipment Malfunction

Should any malfunction occur which cannot be corrected by the procedures described in this guide or the Advanced Operation Guide, disconnect the equipment from the telephone line cable and disconnect the power cord. The telephone line cable should not be reconnected or the main power switch turned ON until the problem is completely resolved. Users should contact their local authorized Canon Facsimile Service Dealer for the servicing of equipment.

If your equipment malfunctions, please contact your local authorized Canon dealer from whom you purchased the equipment (if under warranty), or with whom you have a servicing contract. If you are not sure who to contact, and have both purchased and are using the equipment in the U.S.A., please refer to the “SUPPORT” page on Canon U.S.A.’s Web site (<http://www.usa.canon.com>).

Rights of the Telephone Company

If this equipment (imageRUNNER 1023iF) causes harm to the telephone network, the telephone company may temporarily disconnect service. The telephone company also retains the right to make changes in facilities and services that may affect the operation of this equipment. When such changes are necessary, the telephone company is required to give adequate prior notice to the user. However, if advance notice is not possible, the telephone company will notify the customer as soon as possible. Also, the customer will be advised of his/her right to file a complaint with the FCC if he/she believes it is necessary.

WARNING

The Telephone Consumer Protection Act of 1991 makes it unlawful for any person to use a computer or other electronic device to send any message via a telephone facsimile machine unless such message clearly contains in a margin at the top or bottom of each transmitted page, or on the first page of the transmission, the date and time it is sent and an identification of the business or other entity, or other individual sending the message and the telephone number of the sending machine or such business, other entity, or individual.

NOTE

In order to program this information into your machine, complete the procedure for registering your name, unit’s telephone number, time, and date in the Quick Start Guide.

Preinstallation Requirements for Canon Facsimile Equipment

A. Location

Supply a suitable table, cabinet, or desk for the machine. See Chapter 15, “Appendix,” for specific dimensions and weight.

B. Order Information

1. A single telephone line (touch-tone or rotary) should be used.
2. Order a CA11A modular jack, which should be installed by the telephone company. If the CA11A jack is not present, installation cannot occur.
3. Order a normal business line from your telephone company’s business representative. The line should be a regular voice grade line or an equivalent one. Use one line per unit.

DDD (Direct Distance Dial) line

-or-

IDDD (International Direct Distance Dial) line if you communicate overseas

NOTE

Canon recommends an individual line following industry standards, i.e., 2,500 (touch-tone) or 500 (rotary/pulse dial) telephones. A dedicated extension off a PBX (Private Branch eXchange) unit without “Call Waiting” can be used with your facsimile unit. Key telephone systems are not recommended because they send nonstandard signals to individual telephones for ringing and special codes, which may cause a facsimile error.

C. Power Requirements

The power outlet should be a three-prong grounded receptacle (Single or Duplex). It should be independent from copiers, heaters, air conditioners, or any electric equipment that is thermostatically controlled. The rated value is 115 volts and 15 amperes. The CA11A modular jack should be relatively close to the power outlet to facilitate installation.

Notice

- This product meets the applicable Industry Canada technical specifications.
- The Ringer Equivalence Number is an indication of the maximum number of devices allowed to be connected to a telephone interface. The termination of an interface may consist of any combination of devices subject only to the requirement that the sum of the RENs of all the devices does not exceed five.
- The REN of this product is 1.0.
- Before installing this equipment, users should ensure that it is permissible to be connected to the facilities of the local telecommunications company. The equipment must also be installed using an acceptable method of connection. In some cases, the company's inside wiring associated with a single line individual service may be extended by means of a certified connector assembly (telephone extension cord). The customer should be aware that compliance with the above conditions may not prevent deterioration of service in some situations.
- Repairs to certified equipment should be made by an authorized Canadian maintenance facility designated by the supplier. Any repairs or alterations made by the user to this equipment, or equipment malfunctions, may give the telecommunications company cause to request the user to disconnect the equipment.
- Users should ensure for their own protection that the electrical ground connections of the power utility, telephone lines, and internal metallic water pipe system, if present, are connected together. This precaution may be particularly important in rural areas.

CAUTION

Users should not attempt to make such connections themselves, but should contact the appropriate electric inspection authority, or electrician, as appropriate.

NOTE

This equipment complies with the Canadian ICES-003 Class B limits.

Conditions à Remplir Préalablement à L'installation d'un Télécopieur Canon

A. Emplacement

Prévoir une table, un meuble, ou un bureau suffisamment solide et de taille appropriée (voir le chapitre 14, Annexe (Appendix), pour les indications de poids et dimensions).

B. Installation téléphonique

1. Une seule ligne téléphonique (tonalités ou impulsions) doit être utilisée.
2. Il faut commander un jack modulaire CA11A qui sera installé par la compagnie téléphonique. Sans ce jack, la mise en place serait impossible.
3. Si vous vous abonnez à une nouvelle ligne, demandez une ligne d'affaires normale de qualité téléphonique courante ou équivalente. Prenez un abonnement d'une ligne par appareil.

Ligne automatique interurbaine

ou

Ligne automatique internationale

(si vous communiquez avec les pays étrangers)

NOTE

Canon vous conseille d'utiliser une ligne individuelle conforme aux normes industrielles, à savoir: ligne téléphonique 2,500 (pour appareil à clavier) ou 500 (pour appareil à cadran/impulsions). Il est également possible de raccorder ce télécopieur à un système téléphonique à poussoirs car la plupart de ces systèmes émettent des signaux d'appel non normalisés ou des codes spéciaux qui risquent de perturber le fonctionnement du télécopieur.

C. Condition d'alimentation

Raccordez le télécopieur à une prise de courant plus terre à trois branches, du type simple ou double, et qui ne sert pas à alimenter un copieur, un appareil de chauffage, un climatiseur ou tout autre appareil électrique à thermostat. L'alimentation doit être de 115 volts et 15 ampères. Pour faciliter l'installation, le jack CA11A doit être assez proche de la prise de courant.

Remarques

- Le présent matériel est conforme aux spécifications techniques applicables d'Industrie Canada.
- Avant d'installer cet appareil, l'utilisateur doit s'assurer qu'il est permis de le connecter à l'équipement de la compagnie de télécommunication locale et doit installer cet appareil en utilisant une méthode de connexion autorisée. Il se peut qu'il faille étendre la circuiterie intérieure de la ligne individuelle d'abonné, qui a été installée par la compagnie, au moyen d'un jeu de connecteurs homologués (rallonge téléphonique).
- L'attention de l'utilisateur est attirée sur le fait que le respect des conditions mentionnées ci-dessus ne constitue pas une garantie contre les dégradations de qualité du service dans certaines circonstances.
- L'indice d'équivalence de la sonnerie (IES) sert à indiquer le nombre maximal de terminaux qui peuvent être raccordés à une interface téléphonique. La terminaison d'une interface peut consister en une combinaison quelconque de dispositifs, à la seule condition que la somme d'indices d'équivalence de la sonnerie de tous les dispositifs n'excède pas 5.
- Le nombre d'équivalents sonnerie (REN) de ce produit est 1,0.
- Les réparations sur un appareil certifié doivent être faites par une société d'entretien canadienne autorisée par le Gouvernement canadien et désignée par le fournisseur. Toute réparation ou modification que pourrait faire l'utilisateur de cet appareil, ou tout mauvais fonctionnement, donne à la compagnie de télécommunication le droit de débrancher l'appareil.
- Pour sa propre protection, l'utilisateur doit s'assurer que les prises de terre de l'appareil d'alimentation, les lignes téléphoniques et les tuyaux métalliques internes, s'il y en a, sont bien connectés entre eux. Cette précaution est particulièrement importante dans les zones rurales.

CAUTION

Au lieu d'essayer de faire ces branchements eux-mêmes, les utilisateurs sont invités à faire appel à un service d'inspection faisant autorité en matière d'électricité ou à un électricien, selon le cas.

Laser Safety

This machine complies with 21 CFR Chapter 1 Subchapter J as a Class 1 laser product under the U.S. Department of Health and Human Services (DHHS) Radiation Performance Standard according to the Radiation Control for Health and Safety Act of 1968. This means that the machine does not produce hazardous radiation. Since radiation emitted inside the machine is completely confined within protective housings and external covers, the laser beam cannot escape from the machine during any phase of user operation.

CDRH Regulations

The Center for Devices and Radiological Health (CDRH) of the U.S. Food and Drug Administration implemented regulations for laser products on August 2, 1976. These regulations apply to laser products manufactured from August 1, 1976. Compliance is mandatory for products marketed in the United States.

CAUTION

Use of controls, adjustments, or performance of procedures other than those specified in this manual may result in hazardous radiation exposure.

The label is attached to the laser scanner machine inside the machine and is not in a user access area.

	DANGER - Invisible laser radiation when open. AVOID DIRECT EXPOSURE TO BEAM.

Toner Cartridge

If a message prompting you to replace the toner cartridge appears on the LCD display, replace the toner cartridge with a new one.

Use only the toner cartridges recommended for use with this machine.

⚠ WARNING

- Never dispose toner cartridges in a fire or incinerator, as this may result in an explosion.
- Do not store toner cartridges in places exposed to open flames, as this may cause the toner to ignite and result in burns or a fire.

⚠ CAUTION

- Keep toner and other consumables out of the reach of small children. If these items are ingested, consult a physician immediately.
- When removing a used toner cartridge, remove the toner cartridge carefully to prevent the toner from scattering and getting into your eyes or mouth. If the toner gets into your eyes or mouth, wash them immediately with cold water and immediately consult a physician.
- When discarding used toner cartridges, put the cartridges into a case to prevent the toner remaining inside the cartridges from scattering, and dispose of them in a location away from open flames.

Maintaining the Toner Cartridge

- Store toner cartridges in a cool location, away from direct sunlight.
 - The recommended storage conditions are: temperature below 86 °F (30 °C), and humidity below 80%.
- Never store the cartridges in a vertical position.

■ Genuine Supplies

Canon has developed and manufactured Toner, Parts, and Supplies specifically for use in this machine. For optimal print quality and for optimal machine performance and productivity, we recommend that you use Genuine Canon Toner, Parts, and Supplies. Operation Panel Power Switch

To turn the operation panel ON or OFF, press the operation panel power switch. When turned OFF, the machine is in the Sleep mode.

Operation Panel Power Switch	Machine Status
ON	Standby mode (ready for immediate copying or printing)
OFF	Sleep mode

NOTE

- The machine can receive and print documents from a personal computer when it is in the Sleep mode. I-fax/fax documents can also be received while the machine is in the Sleep mode.
- The energy consumption while the machine is in the Sleep mode can be set in the Additional Functions menu. (See “Energy Consumption in the Sleep Mode,” on p. 1-11, and “Setting Menu,” on p. 14-5.)
- The length of time taken by the machine to enter the Sleep mode can be set in the Additional Functions menu. (See “Setting the Sleep Mode,” on p. 1-13, and “Setting Menu,” on p. 14-5.)
- The machine will not enter the Sleep mode if it is scanning or printing.
- The machine may not enter the Sleep mode completely depending on certain conditions. (For more information, see “Energy Consumption in the Sleep Mode,” on p. 1-11.)
- Turn the operation panel power switch OFF when not using the machine for a prolonged period of time, for example, at night.

Energy Consumption in the Sleep Mode

You can set the amount of energy that the machine consumes when it is in the Sleep mode. If you set the power consumption to <LOW>, the machine consumes less energy during the Sleep mode than when you set it to <HIGH>. However, it takes more time for the machine to resume normal operation.

- 1** Press [Additional Functions].
- 2** Press [←] or [→] to select <COMMON SETTINGS>, then press [OK].
- 3** Press [←] or [→] to select <ENERGY IN SLEEP>, then press [OK].
- 4** Press [←] or [→] to select <HIGH> or <LOW>, then press [OK].
- 5** Press [Stop] to return to the standby mode.

 **NOTE**

- If there is less time than specified in <AUTO SLEEP TIME> remaining before sending a job which has been reserved for delayed sending, the machine will not enter the Sleep mode completely.
- If you are using a management application (such as NetSpot Console) to view or manage the settings and status of the machine via the network, the machine may not enter the Sleep mode completely.
- If you are using the machine as a Windows printer, the machine may not enter the Sleep mode completely if SNMP Status is enabled for your operating system (unless your computer is turned OFF). For more information on disabling SNMP Status, contact your network administrator.
- In some cases, the energy consumption level in the Sleep mode is <HIGH> even when the energy consumption level is set to <LOW>, such as when:
 - A job is being processed (including a forwarding job, report job, receive job, and sending a forwarding done notice).
 - Any of the following settings are set in the Additional Functions menu:

SYSTEM SETTINGS		
COMMUNICATION	MEMORY LOCK	MEMORY RX TM is set to ON*.
NETWORK SETTINGS	TCP/IP SETTINGS SMB SETTINGS E-MAIL/I-FAX	DHCP is set to ON. USE SMB CLIENT is set to ON. POP INTERVAL is set to more than 1MIN.

* If there is more time than specified in <AUTO SLEEP TIME> remaining before the set time limit is reached, the machine consumes the same amount of energy as when the energy consumption level is set to <LOW>.

- The default setting is <LOW>.
- For information on each setting, see Chapter 1, “Advanced Send Features” or Chapter 3, “Network” in the Advanced Operation Guide.

CAUTION

- When closing the ADF/platen glass cover, be careful not to get your fingers caught, as this may result in personal injury.
- Do not press down the ADF/platen glass cover forcefully, as this may damage the platen glass and cause personal injury.

NOTE

Remove the document from the platen glass when scanning is complete.

In the ADF

- 1** Fan the document stack and even the edges.

- 2** Adjust the slide guides to the width of the documents.

3 Neatly place the documents face up in the document feeder tray.

The document is ready for scanning.

NOTE

- Do not add or remove documents while they are being scanned.
- When scanning is complete, remove the documents from the document delivery tray to avoid paper jams.
- Avoid using ADF to scan the same document more than 30 times. When scanned repeatedly, documents can become folded or torn, which may cause paper jams.
- If the feeder rollers are soiled from scanning a document written in pencil, clean them. (See “Cleaning the Machine,” on p. 12-1.)

Paper Guidelines

- To prevent paper jams, do not use any of the following:
 - Wrinkled or creased paper
 - Curled or rolled paper
 - Coated paper
 - Torn paper
 - Damp paper
 - Very thin paper
 - Paper which has been printed on using a thermal transfer printer (Do not copy on the reverse side.)
- The following types of paper do not print well:
 - Highly textured paper
 - Very smooth paper
 - Shiny paper
- Make sure the paper is free from dust, lint, and oil stains.
- Be sure to test paper before purchasing large quantities.
- Store all paper wrapped and on a flat surface until ready for use. Keep opened packs in their original packaging in a cool, dry location.
- Store paper at 64.4°F–75.2°F (18°C–24°C), 40%–60% relative humidity.
- Use only transparencies designed for laser printers. Canon recommends you use Canon type transparencies with this machine.

Loading Paper

To load paper in the paper drawer, see “Set Up the Machine,” in the Quick Start Guide.

In the Stack Bypass (e.g., Envelopes)

If you are making prints on transparencies, labels, nonstandard-sized paper, or envelopes, load them into the stack bypass.

- Use standard envelopes with diagonal seams and flaps.
- To prevent jams, do not use the following:
 - Envelopes with windows, holes, perforations, cutouts, or double flaps
 - Envelopes made with special coated paper or deeply embossed paper
 - Envelopes with peel-off sealing strips
 - Envelopes with letters enclosed
- Make sure to set the correct envelope size in the printer driver. (See Online Help.)

1 Open the stack bypass.

- 2** Pull out the stack bypass extension until it clicks, then open it.

 **NOTE**

Do not load the paper without using the stack bypass extension.

- 3** Gently load the stack of envelopes with the address side facing down and the flap side to the left. Be sure to insert the envelopes as far as they will go.

When you load the envelopes, arrange the stack of envelopes on a firm, clean surface first, then press down firmly on the edges to make the folds crisp.

4 Adjust the slide guides to the width of the paper stack.

NOTE

- Make sure that the paper stack does not exceed the paper limit guide.
- Some types of paper may not feed properly into the stack bypass. For high quality copies, be sure to use the paper and transparencies recommended by Canon.
- When making copies of a small document or thick paper, etc., the copy speed may be slightly slower than usual.

- With direct sending, the machine scans one page into memory at once and sends it right away. Therefore, when <MEMORY FULL> is displayed, even if you have selected direct sending, wait until there is enough space in memory to scan one page, or delete the documents in memory, and try again. (See Chapter 5, “System Monitor,” in the Advanced Operation Guide.)

If a Power Failure Occurs

If power is suddenly lost due to an outage or accidental unplugging, a built-in battery retains the user data settings and the Address Book settings. Any sent or received documents stored in memory are backed up for about 60 minutes.

During a power cut, functions are limited as follows:

- You cannot send, receive, copy, scan, or print documents.
- You may not be able to make telephone calls using an external telephone, depending on the type of telephone you use.
- You can receive telephone calls using an external telephone depending on the type of telephone you use.

Contacting Your Local Authorized Canon Dealer

If a malfunction occurs and the machine cannot operate normally, service call messages appear on the LCD display. Follow the procedure described on the next page to solve the problem.

If you turn OFF the main power when there is any stored job, its data will be deleted.

WARNING

Do not connect or disconnect the power cord with wet hands, as this may result in electrical shock.

CAUTION

Always grasp the power plug portion when disconnecting the power cord. Pulling on the cord portion may expose or snap the core wire, or otherwise damage the power cord. If the power cord is damaged, this could cause an electricity leak and result in a fire or electrical shock.

1 Turn the main power switch OFF. Allow at least ten seconds before turning the main power switch back ON.

2 If the machine still does not operate normally, follow the procedure below, and contact your local authorized Canon dealer.

- Turn OFF the main power.
- Disconnect the power cord from the wall outlet.

 **NOTE**

When contacting your local authorized Canon dealer, check the following:

- Model name
- Problem and status of the machine
- Error code on the LCD display
